

# Basic API routes example

Next.js ships with [API routes](#) which provides an easy solution to build your own `API`. This example shows how to create multiple `API` endpoints with serverless functions, which can execute independently.

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example api-routes api-routes-app
# or
yarn create next-app --example api-routes api-routes-app
# or
pnpm create next-app -- --example api-routes api-routes-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
