

## zh-CN

用 `target` 设置 `Affix` 需要监听其滚动事件的元素，默认为 `window`。

## en-US

Set a `target` for 'Affix', which is listen to scroll event of target element (default is `window`).

```
import React, { useState } from 'react';
import { Affix, Button } from 'antd';

const Demo: React.FC = () => {
  const [container, setContainer] = useState<HTMLDivElement | null>(null);
  return (
    <div className="scrollable-container" ref={setContainer}>
      <div className="background">
        <Affix target={() => container}>
          <Button type="primary">Fixed at the top of container</Button>
        </Affix>
      </div>
    </div>
  );
};

export default () => <Demo />;
```
