

Home > puppeteer > Frame > waitForFunction

Frame.waitForFunction() method

Signature:

```
waitForFunction(pageFunction: Function | string, options?: FrameWaitForFunctionOptions, ...args)
```

Parameters

Parameter	Type	Description
pageFunction	Function string	the function to evaluate in the frame context.
options	FrameWaitForFunctionOptions	options to configure the polling method and timeout.
args	SerializableOrJSHandle[]	arguments to pass to the pageFunction.

Returns:

Promise<JSHandle>

the promise which resolve when the `pageFunction` returns a truthy value.

Remarks

Example

The `waitForFunction` can be used to observe viewport size change:

```
const puppeteer = require('puppeteer');

(async () => {
  . const browser = await puppeteer.launch();
  . const page = await browser.newPage();
  . const watchDog = page.mainFrame().waitForFunction('window.innerWidth < 100');
  . page.setViewport({width: 50, height: 50});
  . await watchDog;
  . await browser.close();
})();
```

To pass arguments from Node.js to the predicate of `page.waitForFunction` function:

```
const selector = '.foo';
await frame.waitForFunction(
```

```
selector => !!document.querySelector(selector),  
  {}, // empty options object  
  selector  
);
```
