

Script component

This example shows different strategies that can be used for the [next/script](#) [component](#):

- [Loading Polyfills](#)
- [Lazy loading](#)
- [Executing code after loading](#)
- [Inline scripts](#)
- [Forwarding attributes](#)

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example script-component script-component-app
# or
yarn create next-app --example script-component script-component-app
# or
pnpm create next-app -- --example script-component script-component-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
