Elementos ocultos visualmente

The visually hidden style utility provides a common mechanism for hiding elements visually, but making them available for assistive technology. It's a simple style object of type `React.CSSProperties`.

```
{{"demo": "VisuallyHiddenUsage.js", "defaultCodeOpen": true}}
```

If you don't have a strict CSP policy in place, you can also do:

```
import { visuallyHidden } from '@material-ui/utils';

<div style={visuallyHidden}>about how to visually hide elements</div>;
```
