

Example app with strict CSP generating script hash

This example features how you can set up a strict CSP for your pages including Next.js' inline bootstrap script by hash. It defines the CSP by document `meta` tag.

Note: There are still valid cases for using a nonce in case you need to inline scripts or styles for which calculating a hash is not feasible.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-strict-csp with-strict-csp-app
# or
yarn create next-app --example with-strict-csp with-strict-csp-app
# or
pnpm create next-app -- --example with-strict-csp with-strict-csp-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
