

Contributing

Logr is open to pull-requests, provided they fit within the intended scope of the project. Specifically, this library aims to be VERY small and minimalist, with no external dependencies.

Compatibility

This project intends to follow semantic versioning and is very strict about compatibility. Any proposed changes MUST follow those rules.

Performance

As a logging library, logr must be as light-weight as possible. Any proposed code change must include results of running the benchmark before and after the change.
