

Transfer List React component

Transfer List

A transfer list (or “shuttle”) enables the user to move one or more list items between lists.

```
{{“component”: “modules/components/ComponentLinkHeader.js”, “design”: false}}
```

Basic transfer list

For completeness, this example includes buttons for “move all”, but not every transfer list needs these.

```
{{“demo”: “TransferList.js”, “bg”: true}}
```

Enhanced transfer list

This example exchanges the “move all” buttons for a “select all / select none” checkbox, and adds a counter.

```
{{“demo”: “SelectAllTransferList.js”, “bg”: true}}
```

Limitations

The component comes with a couple of limitations:

- It only works on desktop. If you have a limited amount of options to select, prefer the Autocomplete component. If mobile support is important for you, have a look at [#27579](#).
- There are no high-level components exported from npm. The demos are based on composition. If this is important for you, have a look at [#27579](#).
