

Missing Document Components

Why This Error Occurred In your custom `pages/_document` an expected sub-component was not rendered.

Possible Ways to Fix It Make sure to import and render all of the expected Document components:

- `<Html />`
- `<Head />`
- `<Main />`
- `<NextScript />`

For example:

```
import Document, { Html, Head, Main, NextScript } from 'next/document'
```

```
export default class MyDocument extends Document {  
  render() {  
    return (  
      <Html>  
        <Head />  
        <body>  
          <Main />  
          <NextScript />  
        </body>  
      </Html>  
    )  
  }  
}
```
