

Since the two conditions — `if user.loggedIn` and `if !user.loggedIn` — are mutually exclusive, we can simplify this component slightly by using an `else` block:

```
{#if user.loggedIn}
  <button on:click={toggle}>
    Log out
  </button>
{:else}
  <button on:click={toggle}>
    Log in
  </button>
{/if}
```

A `#` character always indicates a block opening tag. A `/` character always indicates a block closing tag. A `:` character, as in `{:else}`, indicates a block continuation tag. Don't worry — you've already learned almost all the syntax Svelte adds to HTML.
