

## Collecting page data timed out after multiple attempts

**Why This Error Occurred** Next.js tries to restart the worker pool of the page data collection when no progress happens for a while, to avoid hanging builds.

When restarted it will retry all uncompleted jobs, but if a job was unsuccessfully attempted multiple times, this will lead to an error.

### Possible Ways to Fix It

- Make sure that there is no infinite loop during execution.
- Make sure all Promises in `getStaticPaths` **resolve** or **reject** correctly.
- Avoid very long timeouts for network requests.
- Increase the timeout by changing the `config.staticPageGenerationTimeout` configuration option (default 60 in seconds).
