

Adding AMP Components

The AMP community provides many components to make AMP pages more interactive. Next.js will automatically import all components used on a page and there is no need to manually import AMP component scripts:

```
export const config = { amp: true }

function MyAmpPage() {
  const date = new Date()

  return (
    <div>
      <p>Some time: {date.toJSON()}</p>
      <amp-timeago
        width="0"
        height="15"
        datetime={date.toJSON()}
        layout="responsive"
      >
        .
      </amp-timeago>
    </div>
  )
}

export default MyAmpPage
```

The above example uses the `amp-timeago` component.

By default, the latest version of a component is always imported. If you want to customize the version, you can use `next/head`, as in the following example:

```
import Head from 'next/head'

export const config = { amp: true }

function MyAmpPage() {
  const date = new Date()

  return (
    <div>
      <Head>
        <script
          async
          key="amp-timeago"
          custom-element="amp-timeago"
          src="https://cdn.ampproject.org/v0/amp-timeago-0.1.js"
        />
      </Head>
    </div>
  )
}
```

```

        />
    </Head>

    <p>Some time: {date.toJSON()}</p>
    <amp-timeago
      width="0"
      height="15"
      datetime={date.toJSON()}
      layout="responsive"
    >
      .
    </amp-timeago>
  </div>
)
}

export default MyAmpPage

```
