

## PostBody Object

- **data** (`UploadRawData` | `UploadFile`)[] - The post data to be sent to the new window.
- **contentType** string - The **content-type** header used for the data. One of `application/x-www-form-urlencoded` or `multipart/form-data`. Corresponds to the **enctype** attribute of the submitted HTML form.
- **boundary** string (optional) - The boundary used to separate multiple parts of the message. Only valid when **contentType** is `multipart/form-data`.
