视觉上被隐藏的元素

The visually hidden style utility provides a common mechanism for hiding elements visually, but making them available for assistive technology. It's a simple style object of type `React.CSSProperties`.

```
{ "demo": "VisuallyHiddenUsage.js", "defaultCodeOpen": true }
```

如果你不追求实现严格的 CSP 政策，那么也可以这样编写代码：

```
import { visuallyHidden } from '@material-ui/utils';

<div style={visuallyHidden}>about how to visually hide elements</div>;
```
