

Instructions for using benchpress (how to create benchmarks, how to run, how to configure) can be found at:
<https://github.com/angular/benchpress/blob/master/README.md>.

In this project, there is a configured grunt task for building the benchmarks, `grunt bp_build`, which places the runnable benchmarks in `"/build/benchmarks/"`. The existing `grunt webserver` task can be used to serve the built benchmarks at `localhost:8000/build/benchmarks/<benchmark-name>`
