

A feature attribute named a feature that was disallowed in the compiler command line flags.

Erroneous code example:

```
ignore (can't specify compiler flags from doctests) #![feature(never_type)]
// error: the feature `never_type` is not in          //
the list of allowed features
```

Delete the offending feature attribute, or add it to the list of allowed features in the `-Z allow_features` flag.
