

Invalid webpack resolve alias

Why This Error Occurred

When overriding `config.resolve.alias` incorrectly in `next.config.js` webpack will throw an error because `private-next-pages` is not defined.

Possible Ways to Fix It

This is not a bug in Next.js, it's related to the user adding a custom `webpack(config)` config to `next.config.js` and overriding internals by not applying Next.js' aliases. Solution would be:

```
webpack(config) {  
  config.resolve.alias = {  
    ...config.resolve.alias,  
    // your aliases  
  }  
}
```
