

zh-CN

使用 `labelWrap` 可以开启 `label` 换行。

en-US

Turn on `labelWrap` to wrap label if text is long.

```
import { Form, Input, Button } from 'antd';

const Demo = () => (
  <Form
    name="wrap"
    labelCol={{ flex: '110px' }}
    labelAlign="left"
    labelWrap
    wrapperCol={{ flex: 1 }}
    colon={false}
  >
    <Form.Item label="正常标签文案" name="username" rules={[{ required: true }]}>
      <Input />
    </Form.Item>

    <Form.Item label="超长标签文案超长标签文案" name="password" rules={[{ required: true }]}>
      <Input />
    </Form.Item>

    <Form.Item label=" ">
      <Button type="primary" htmlType="submit">
        Submit
      </Button>
    </Form.Item>
  </Form>
);

export default () => <Demo />;
```
