

c_unwind

The tracking issue for this feature is: #74990

Introduces new ABI strings: - “C-unwind” - “cdecl-unwind” - “stdcall-unwind” - “fastcall-unwind” - “vectorcall-unwind” - “thiscall-unwind” - “aapcs-unwind” - “win64-unwind” - “sysv64-unwind” - “system-unwind”

These enable unwinding from other languages (such as C++) into Rust frames and from Rust into other languages.

See RFC 2945 for more information.
