

next-connect and Passport

This example creates a basic [CRUD](#) app using [next-connect](#) and cookie-based authentication with [Passport.js](#). The cookie is securely encrypted using [@hapi/iron](#).

The example shows how to do a sign up, login, logout, and account deactivation. It utilizes [SWR](#) to fetch the API.

For demo purpose, the users database is stored in the cookie session. You need to replace it with an actual database to store users in [db.js](#).

Deploy your own

Deploy the example using [Vercel](#):

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-passport-and-next-connect with-passport-and-next-connect-app
# or
yarn create next-app --example with-passport-and-next-connect with-passport-and-next-connect-app
# or
pnpm create next-app -- --example with-passport-and-next-connect with-passport-and-next-connect-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
