

build unknown

indent-string

Indent each line in a string

Install

```
$ npm install indent-string
```

Usage

```
const indentString = require('indent-string');

indentString('Unicorns\nRainbows', 4);
//=> '    Unicorns\n    Rainbows'

indentString('Unicorns\nRainbows', 4, {indent: '♥'});
//=> '♥♥♥♥Unicorns\n♥♥♥♥Rainbows'
```

API

indentString(string, [count], [options])

string

Type: `string`

The string to indent.

count

Type: `number`

Default: `1`

How many times you want `options.indent` repeated.

options

Type: `object`

indent

Type: `string`

Default: `' '`

The string to use for the indent.

includeEmptyLines

Type: `boolean`

Default: `false`

Also indent empty lines.
