

Styles

We created a custom Bootstrap 4 style & templates to ensure all frontends had consistent UI functionality. Our [starter kit](#) includes all the [templates & info required to get up and running](#).

Instead of having the Bootstrap theme included locally, we recommend loading the precompiled theme from our CDN (our [header template](#) does this by default):

```
<link rel="stylesheet" href="//demo.productionready.io/main.css">
```

Alternatively, if you want to make modifications to the theme, check out the [theme's repo](#).
