

Yarn Vendoring

We utilize Yarn's `yarn-path` configuration in a shared `.yarnrc` file to enforce everyone using the same version of Yarn. Yarn checks the `.yarnrc` file to determine if yarn should delegate the command to a vendored version at the provided path.

How to update

To update to the latest version of Yarn as our vendored version:

- Run this command

```
yarn policies set-version latest
```

- Remove the previous version
