

framer-motion example

Framer [Motion](#) is a production-ready animation library. By using a custom [<App>](#) along with Motion's [AnimatePresence](#) component, transitions between Next pages becomes simple and declarative.

When using Next's `<Link>` component, you will likely want to [disable the default scroll behavior](#) for a more seamless navigation experience. Scrolling to the top of a page can be re-enabled by adding a `onExitComplete` callback on the `AnimatePresence` component.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-framer-motion with-framer-motion-app
# or
yarn create next-app --example with-framer-motion with-framer-motion-app
# or
pnpm create next-app -- --example with-framer-motion with-framer-motion-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
