```

Name

fe-open - Open a frontend device

Synopsis

```
#include <fcntl.h>
```

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 22)
```

Unknown directive type "c:function".

```
.. c:function:: int open( const char *device_name, int flags )
```

Arguments

device_name

Device to be opened.

flags

Open flags. Access can either be `O_RDWR` or `O_RDONLY`.

Multiple opens are allowed with `O_RDONLY`. In this mode, only query and read ioctls are allowed.

Only one open is allowed in `O_RDWR`. In this mode, all ioctls are allowed.

When the `O_NONBLOCK` flag is given, the system calls may return `EAGAIN` error code when no data is available or when the device driver is temporarily busy.

Other flags have no effect.

Description

This system call opens a named frontend device (`/dev/dvb/adapter?/frontend?`) for subsequent use. Usually the first thing to do after a successful open is to find out the frontend type with [ref: FE_GET_INFO](#).

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 48); backlink
```

Unknown interpreted text role "ref".

The device can be opened in read-only mode, which only allows monitoring of device status and statistics, or read/write mode, which allows any kind of use (e.g. performing tuning operations.)

In a system with multiple front-ends, it is usually the case that multiple devices cannot be open in read/write mode simultaneously. As long as a front-end device is opened in read/write mode, other `open()` calls in read/write mode will either fail or block, depending on whether non-blocking or blocking mode was specified. A front-end device opened in blocking mode can later be put into non-blocking mode (and vice versa) using the `F_SETFL` command of the `fcntl` system call. This is a standard system call, documented in the Linux manual page for `fcntl`. When an `open()` call has succeeded, the device will be ready for use in the specified mode. This implies that the corresponding hardware is powered up, and that other front-ends may have been powered down to make that possible.

Return Value

On success `rc:func:'open()` returns the new file descriptor. On error, -1 is returned, and the `errno` variable is set appropriately.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 73); [backlink](#)

Unknown interpreted text role "c:func".

Possible error codes are:

On success 0 is returned, and `rc:type:'ca_slot_info'` is filled.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 78); [backlink](#)

Unknown interpreted text role "c:type".

On error -1 is returned, and the `errno` variable is set appropriately.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 83)

Unknown directive type "tabularcolumns".

```
.. tabularcolumns:: |p{2.5cm}|p{15.0cm}|
```

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\linux-master) (Documentation) (userspace-api) (media) (dvb) frontend_f_open.rst, line 85)

Unknown directive type "flat-table".

```
.. flat-table::
   :header-rows: 0
   :stub-columns: 0
   :widths: 1 16

   - - ``EPERM``
     - The caller has no permission to access the device.

   - - ``EBUSY``
     - The the device driver is already in use.

   - - ``EMFILE``
     - The process already has the maximum number of files open.

   - - ``ENFILE``
     - The limit on the total number of files open on the system has been
       reached.
```

The generic error codes are described at the [ref'Generic Error Codes <gen-errors>](#) chapter.
