

zh-CN

可以为 Radio.Group 配置 `name` 参数，为组合内的 input 元素赋予相同的 `name` 属性，使浏览器把 Radio.Group 下的 Radio 真正看作是一组（例如可以通过方向键始终在**同一组内**更改选项）。

en-US

Passing the `name` property to all `input[type="radio"]` that are in the same Radio.Group. It is usually used to let the browser see your Radio.Group as a real "group" and keep the default behavior. For example, using left/right keyboard arrow to change your selection that in the same Radio.Group.

```
import { Radio } from 'antd';

const App = () => (
  <Radio.Group name="radiogroup" defaultValue={1}>
    <Radio value={1}>A</Radio>
    <Radio value={2}>B</Radio>
    <Radio value={3}>C</Radio>
    <Radio value={4}>D</Radio>
  </Radio.Group>
);

export default () => <App />;
```
