

Rails dev tools

This is a collection of utilities used for Rails internal development. They aren't used by Rails apps directly.

- `console` drops you in irb and loads local Rails repos
- `profile` `profiles` `Kernel#require` to help reduce startup time
- `line_statistics` provides CodeTools module and LineStatistics class to count lines
- `test` is loaded by every major component of Rails to simplify testing, for example: `cd`
`./actioncable; bin/test ./path/to/actioncable_test_with_line_number.rb:5`
