## Built-in role assignments

To control what your users can access or not, you can assign or unassign [Custom roles]({{< ref “#custom-roles” >}}) or [Fixed roles]({{< ref “#fixed-roles” >}}) to the existing [Organization roles]({{< relref “../..../administration/manage-users-and-permissions/about-users-and-permissions.md#organization-users-and-permissions” >}}) or to the [Grafana Server Admin]({{< relref “../..../administration/manage-users-and-permissions/about-users-and-permissions.md#grafana-server-administrators” >}}) role.

These assignments are called built-in role assignments.

During startup, Grafana will create default assignments for you. When you make any changes to the built-on role assignments, Grafana will take them into account and won’t overwrite during next start.

For more information, refer to [Fine-grained access control references]({{< relref “../fine-grained-access-control-references.md#default-built-in-role-assignments” >}}).

## Manage built-in role assignments

You can create or remove built-in role assignments using [Fine-grained access control API]({{< relref “../..../http\_api/access\_control.md#create-and-remove-built-in-role-assignments” >}}) or using [Grafana Provisioning]({{< relref “../provisioning.md#manage-default-built-in-role-assignments” >}}).
