Basic example

Place one add-on or button on either side of an input. You may also place one on both sides of an input. Remember to place `<label>`s outside the input group.

```
{{< example >}}
```

@

@example.com

Your vanity URL

\$.00

@

With textarea

```
{{< /example >}}
```

Wrapping

Input groups wrap by default via **flex-wrap: wrap** in order to accommodate custom form field validation within an input group. You may disable this with **.flex-nowrap**.

```
{{< example >}}
```

@

```
{{< /example >}}
```

Sizing

Add the relative form sizing classes to the **.input-group** itself and contents within will automatically resize—no need for repeating the form control size classes on each element.

Sizing on the individual input group elements isn't supported.

```
{{< example >}}
```

Small

Default

Large

```
{{< /example >}}
```

Checkboxes and radios

Place any checkbox or radio option within an input group's addon instead of text. We recommend adding **.mt-0** to the **.form-check-input** when there's no visible text next to the input.

```
{{< example >}}
```

```
<input class="form-check-input mt-0" type="checkbox" value="" aria-label="Checkbox for follow up">
```

```
<input class="form-check-input mt-0" type="radio" value="" aria-label="Radio button for follow up">
```

```
{{< /example >}}
```

Multiple inputs

While multiple **<input>**s are supported visually, validation styles are only available for input groups with a single **<input>**.

```
{{< example >}}
```

First and last name

```
{{< /example >}}
```

Multiple addons

Multiple add-ons are supported and can be mixed with checkbox and radio input versions.

Custom forms

Input groups include support for custom selects and custom file inputs. Browser default versions of these are not supported.
