

Unstated example

This example shows how to integrate [Unstated Next](#) with Next.js.

There are two pages, `/` and `/about`, both render a counter and a timer, the state is saved for the current page and reset when switching to a different page. To keep a shared state between pages you can add the state providers to `pages/_app.js` instead of using the page.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-unstated with-unstated-app
# or
yarn create next-app --example with-unstated with-unstated-app
# or
pnpm create next-app -- --example with-unstated with-unstated-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
