

zh-CN

通过 `prefix` 属性自定义触发字符。默认为 `@`，可以定义为数组。

en-US

Customize Trigger Token by `prefix` props. Default to `@`, `Array<string>` also supported.

```
import { Mentions } from 'antd';

const { Option } = Mentions;

const MOCK_DATA = {
  '@': ['afcl63', 'zombiej', 'yesmeck'],
  '#': ['1.0', '2.0', '3.0'],
};

class App extends React.Component {
  state = {
    prefix: '@',
  };

  onSearch = (_, prefix) => {
    this.setState({ prefix });
  };

  render() {
    const { prefix } = this.state;

    return (
      <Mentions
        style={{ width: '100%' }}
        placeholder="input @ to mention people, # to mention tag"
        prefix={['@', '#']}
        onSearch={this.onSearch}
      >
        {(MOCK_DATA[prefix] || []).map(value => (
          <Option key={value} value={value}>
            {value}
          </Option>
        ))}
      </Mentions>
    );
  }
}

export default () => <App />;
```
