

# Website

This website is built using Docusaurus 2, a modern static website generator.

## Installation

```
$ npm install
```

## Local Development

```
$ npm start
```

This command starts a local development server and open up a browser window. Most changes are reflected live without having to restart the server.

## Build

```
$ npm run build
```

This command generates static content into the `build` directory and can be served using any static contents hosting service.

## Deployment

```
$ GIT_USER=<Your GitHub username> USE_SSH=1 npm run deploy
```

If you are using GitHub pages for hosting, this command is a convenient way to build the website and push to the `gh-pages` branch.
