

# CHANGELOG

## **v2.0.0, 2020-10-04**

Use WebViewAssetLoader on Android with newest cordova AndroidX webview usage

## **v1.9.1, 2020-03-05**

Removes hook to set Swift version

## **v1.9.0, 2020-03-04**

Migrates Swift code to be compatible with Swift version 5

## **v1.8.0, 2020-01-16**

It makes cordova-plugin-meteor-webapp ready for Cordova 9. - changes context.requireCordovaModule to require for non-Cordova modules - removes .woff content type test because it never worked - updates travis test to use recent versions - removes .paramedic.config.js and use options directly on package.json - declares xcode as npm dependency - updates dev dependencies - updates DEVELOPMENT.md

This version should be used for apps running Meteor 1.10 forward.

## **v1.7.4, 2020-01-16**

We didn't had a tag for 1.7.0 that was the last version before the updates for Cordova 9 then we published 1.7.4 from this revision d5a7377c.

This version should be used for apps running Meteor 1.9 or previous versions.
