

Note: this error code is no longer emitted by the compiler. The length of the platform-intrinsic function `simd_shuffle` wasn't specified.

Erroneous code example:

```
“ignore (no longer emitted) #[feature(platform_intrinsics)]
```

```
extern “platform-intrinsic” { fn simd_shuffle<A,B>(a: A, b: A, c: [u32; 8]) ->  
B; // error: invalid simd_shuffle, needs length: simd_shuffle }
```

The `simd_shuffle` function needs the length of the array passed as last parameter in its name. Example:

```
#[feature(platform_intrinsics)]
```

```
extern “platform-intrinsic” { fn simd_shuffle8<A,B>(a: A, b: A, c: [u32; 8]) ->  
B; } “
```
