

Home > puppeteer > Page > \$x

Page.\$x() method

The method evaluates the XPath expression relative to the page document as its context node. If there are no such elements, the method resolves to an empty array.

Signature:

```
$x(expression: string): Promise<ElementHandle[]>;
```

Parameters

Parameter	Type	Description
expression	string	Expression to evaluate

Returns:

```
Promise<ElementHandle[]>
```

Remarks

Shortcut for Page.mainFrame().\$x(expression).
