

zh-CN

使用 `style` 和 `className` 来定义样式。

en-US

The `style` and `className` are available to customize Message.

```
import { message, Button } from 'antd';

const success = () => {
  message.success({
    content: 'This is a prompt message with custom className and style',
    className: 'custom-class',
    style: {
      marginTop: '20vh',
    },
  });
};

export default () => <Button onClick={success}>Customized style</Button>;
```
