

UFW plugin

This plugin adds completion for managing everybody's favorite Uncomplicated Firewall (UFW), a simple interface for managing iptables. Learn more about UFW.

To use it, add ufw to the plugins array of your zshrc file:

```
plugins=(... ufw)
```

Some of the commands include:

- **allow** <port>/<optional: protocol> add an allow rule
- **default** set default policy
- **delete** <port>/<optional: protocol> delete RULE
- **deny** <port>/<optional: protocol> add deny rule
- **disable** disables the firewall
- **enable** enables the firewall
