

cloud-provider

This repository defines the cloud-provider interface and mechanism to initialize a cloud-provider implementation into Kubernetes. Currently multiple processes use this code although the intent is that it will eventually only be cloud controller manager.

Note: go-get or vendor this package as `k8s.io/cloud-provider`.

Purpose

This library is a shared dependency for processes which need to be able to integrate with cloud-provider specific functionality.

Compatibility

Cloud Providers are expected to keep the HEAD of their implementations in sync with the HEAD of this repository.

Where does it come from?

`cloud-provider` is synced from <https://github.com/kubernetes/kubernetes/blob/master/staging/src/k8s.io/cloud-provider>. Code changes are made in that location, merged into `k8s.io/kubernetes` and later synced here.

Things you should NOT do

1. Add an cloud provider specific code to this repo.
2. Directly modify anything under `vendor/k8s.io/cloud-provider` in this repo.
Those are driven from `k8s.io/kubernetes/staging/src/k8s.io/cloud-provider`.
3. Make interface changes without first discussing them with sig-cloudprovider.
