

Kontent Will it Build Example

Example site for Kontent as a source for "Will It Build". Should/Will be generalized into e.g. a theme.

Queries the title, body and a cover image from Kontent. Creates pages for that and displays those three things as "Articles". Those individual article pages and the homepage share a common "Layout" component (in `src/components`) that can be swapped (`layout_1.js` and `layout_2.js`) to simulate a code change in multiple pages.
