

The TypeScript Wiki is for people who are interested in:

- Debugging TypeScript problems: [Performance](#), [Tracing](#), [Debugging](#)
- [Using the compiler API](#)
- [Wanting to contribute to the TypeScript codebase or to understand the compiler](#)

It is also used as a scratch-pad for one-off links which are useful when triaging GitHub issues. For example the [FAQ](#)

If you are after documentation on how to use TypeScript the language, or the build tool: please see:

<https://www.typescriptlang.org>
