

Home > puppeteer > JSHandle > jsonValue

JSHandle.jsonValue() method

Signature:

```
jsonValue<T = unknown>(): Promise<T>;
```

Returns:

Promise<T>

Returns a JSON representation of the object. If the object has a `toJSON` function, it will not be called.

Remarks

The JSON is generated by running `JSON.stringify` on the object in page and consequent `JSON.parse` in puppeteer. ****NOTE**** The method throws if the referenced object is not stringifiable.
