This module adds the ability to import Python modules (:file:`*.py`, :file:`*.pyc`) and packages from ZIP-format archives. It is usually not needed to use the :mod:`zipimport` module explicitly; it is automatically used by the built-in :keyword:`import` mechanism for :data:`sys.path` items that are paths to ZIP archives.

Typically, :data:`sys.path` is a list of directory names as strings. This module also allows an item of :data:`sys.path` to be a string naming a ZIP file archive. The ZIP archive can contain a subdirectory structure to support package imports, and a path within the archive can be specified to only import from a subdirectory. For example, the path :file:`example.zip/lib/` would only import from the :file:`lib/` subdirectory within the archive.

Any files may be present in the ZIP archive, but importers are only invoked for `:file:'.py'` and `:file:'.pyc'` files. ZIP import of dynamic modules (`:file:'.pyd'`, `:file:'.so'`) is disallowed. Note that if an archive only contains `:file:'.py'` files, Python will not attempt to modify the archive by adding the corresponding `:file:'.pyc'` file, meaning that if a ZIP archive doesn't contain `:file:'.pyc'` files, importing may be rather slow.

zipimporter Objects

`class: 'zipimport'` is the class for importing ZIP files.

Create a new `zipimporter` instance. *archivepath* must be a path to a ZIP file, or to a specific path within a ZIP file. For example, an *archivepath* of `:file:'foo/bar.zip/lib'` will look for modules in the `:file:'lib'` directory inside the ZIP file `:file:'foo/bar.zip'` (provided that it exists).
