

## Get Grafana help

---

First, check the official Grafana documentation.

If you require further help or support then ask a question in the Grafana community site or Grafana Slack. You can also search the community site for previously answered questions, in case someone already had your problem and got help.

**Please note:**

- The Grafana project uses GitHub mainly for tracking bugs and feature requests.
- Do not open an issue just to ask a question. The issue will be closed immediately.
- Only submit issues for bug reports, feature requests, or enhancements.
