

A struct's or struct-like enum variant's field was not provided.

Erroneous code example:

```
struct Foo {  
    x: i32,  
    y: i32,  
}  
  
fn main() {  
    let x = Foo { x: 0 }; // error: missing field: `y`  
}
```

Each field should be specified exactly once. Example:

```
struct Foo {  
    x: i32,  
    y: i32,  
}  
  
fn main() {  
    let x = Foo { x: 0, y: 0 }; // ok!  
}
```
