

Set the `visibility` of elements with our visibility utilities. These utility classes do not modify the `display` value at all and do not affect layout – `.invisible` elements still take up space in the page.

{{< callout warning >}} Elements with the `.invisible` class will be hidden *both* visually and for assistive technology/screen reader users. {{< /callout >}}

Apply `.visible` or `.invisible` as needed.

```
<div class="visible">...</div>
<div class="invisible">...</div>
```

```
// Class
.visible {
  visibility: visible !important;
}
.invisible {
  visibility: hidden !important;
}
```

## Sass

### Utilities API

Visibility utilities are declared in our utilities API in `scss/_utilities.scss`. [Learn how to use the utilities API.]
