

Home > puppeteer > EventEmitter > emit

EventEmitter.emit() method

Emit an event and call any associated listeners.

Signature:

```
emit(event: EventType, eventData?: unknown): boolean;
```

Parameters

Parameter	Type	Description
event	EventType	the event you'd like to emit
eventData	unknown	any data you'd like to emit with the event

Returns:

boolean

true if there are any listeners, **false** if there are not.
