

The Bulma website has been widely redesigned! There's been a lot of work, to say the least:

Just see for yourself!

Before

After

```
{% include elements/anchor.html name="Navbar" %}
```

The **navbar** has been updated with a lighter markup and cleaner design:

This doesn't affect the current navbars. There's actually a new modifier called `is-spaced` that was created for this new navbar. Documentation coming soon!

```
{% include elements/anchor.html name="Customize example" %}
```

On the homepage, there's a new [customization section with a live example](#):

```
{% include elements/anchor.html name="Breadcrumb" %}
```

A **breadcrumb** is now visible at the top of each page, to easily navigate up and down the hierarchy.

This has led to the creation of new **intermediate pages**:

- [documentation](#)
- [documentation/modifiers](#)
- [documentation/columns](#)
- [documentation/layout](#)
- [documentation/form](#)
- [documentation/elements](#)
- [documentation/components](#)
- [more](#)

```
{% include elements/anchor.html name="Links" %}
```

These intermediate pages have new **link boxes** that help dive into each sub-category:

```
{% include elements/anchor.html name="Previous/Next" %}
```

Next to the breadcrumb, you can easily navigate to the **sibling** pages with the **previous** and **next** links:

These links are also available at the bottom:

```
{% include elements/anchor.html name="Categories" %}
```

There's a new **sidebar** including a navigation menu with all the categories and sub-categories:

```
{% include elements/anchor.html name="Scroll spy" %}
```

On some pages below the categories, you'll find a new menu called "On this page" which is actually a **scroll spy**:

```
{% include elements/anchor.html name="Footer" %}
```

The footer has been redesigned as well. Among other things, there's a **sitemap** available:

```
{% include elements/anchor.html name="Code" %}
```

The Bulma website is built with **Jekyll**. In the process of this redesign, the underlying code that helps maintain this website has been optimized and cleaned up as well.

This will help further updates to be easier.
