

# AMP Support

## ► Examples

With Next.js you can turn any React page into an AMP page, with minimal config, and without leaving React.

You can read more about AMP in the official [amp.dev](https://amp.dev) site.

## Enabling AMP

To enable AMP support for a page, and to learn more about the different AMP configs, read the [API documentation for `next/amp`](#).

## Caveats

- Only CSS-in-JS is supported. [CSS Modules](#) aren't supported by AMP pages at the moment. You can [contribute CSS Modules support to Next.js](#).
