

URLTools plugin

This plugin provides two aliases to URL-encode and URL-decode strings.

To start using it, add the `urltools` plugin to your plugins array in `~/.zshrc` :

```
plugins=(... urltools)
```

Original author: [Ian Chesal](#) Original idea and aliases: [Ruslan Spivak](#)

Commands

Command	Description
<code>urlencode</code>	URL-encodes the given string
<code>urldecode</code>	URL-decodes the given string

Examples

```
urlencode 'https://github.com/ohmyzsh/ohmyzsh/search?q=urltools&type=Code'
# returns
https%3A%2F%2Fgithub.com%2Fohmyzsh%2Fohmyzsh%2Fsearch%3Fq%3Durltools%26type%3DCode

urldecode
'https%3A%2F%2Fgithub.com%2Fohmyzsh%2Fohmyzsh%2Fsearch%3Fq%3Durltools%26type%3DCode'
# returns https://github.com/ohmyzsh/ohmyzsh/search?q=urltools&type=Code
```
