

# mypy

The `mypy` static type checker is used to check the following code against each Python version supported by the controller:

- `lib/ansible/`
- `test/lib/ansible_test/_internal/`

Additionally, the following code is checked against Python versions supported only on managed nodes:

- `lib/ansible/modules/`
- `lib/ansible/module_utils/`

See <https://mypy.readthedocs.io/en/stable/> for additional details.
